ABSTRACT OF THE DISCLOSURE

- Methods for making reagent test strips are provided. In the subject methods, a

 test strip precursor made up of an elongated support material having a planar surface
 and a narrow stripe of reagent material positioned along its central axis is cut
 according to an inter-digitating pattern to produce the plurality of reagent test strips.

 The initial precursor material may be a tape or in the form of a card. Also provided are
 the reagent test strips produced by the subject methods and kits that include the same.
- The subject reagent test strips and kits find use in analyte detection and/or concentration determination assays.
